

Genpact Launches Agentic AP Suite Solution

Genpact has announced the launch of its Agentic Genpact AP Suite, a new solution designed to transform accounts payable (AP) operations through autonomous, goal-oriented AI capabilities. The solution is part of Genpact's Service-as-Agentic-Solutions portfolio and is powered by Microsoft Azure's AI stack.

The AP Suite combines advanced document processing, predictive insights, and conversational AI to streamline and automate end-to-end AP workflows, reducing manual intervention and improving operational efficiency.

Han emphasized Genpact's focus on building transformational solutions grounded in deep industry expertise. "Our Service-as-Agentic-Solutions are proprietary Genpact products that transform mission-critical business processes," said Jinsook Han, Chief Strategy, Corporate Development & Global Agentic AI Officer at Genpact. "The Genpact AP Suite is one in a series of domain-specific agents we will introduce to the market. We are not just building products—we are building transformational engines, backed by decades of experience in industry processes and trained on vast numbers of real transactions."

The Genpact AP Suite includes four core modules—AP Capture, AP Advance, AP Trace, and AP Assist—each supported by a network of AI agents that work across different stages of the accounts payable lifecycle.

These self-learning agents are designed to intelligently ingest and validate invoices, improve touchless processing, resolve exceptions, and adapt to evolving supplier terms, tax rules, and approval workflows. The system also helps streamline inquiry resolution and reduces dependency on manual processes.

Early client implementations are already delivering measurable outcomes, including more accurate autonomous data capture, higher touchless processing rates, improved productivity, enhanced cash visibility, and reduced leakage through up to 90% early discount capture. The solution is also improving supplier experience through faster processing and automated query resolution.

Han noted that the AP Suite elevates finance from a cost center to a strategic business function.

“The Genpact AP Suite addresses inefficiencies, reduces errors, eliminates manual workflows, and elevates finance from a cost center to a pivotal strategic differentiator. With the Genpact AP Suite, we’re combining agentic AI agents, human intelligence, and autonomous goal-oriented processes into a system that continuously learns and improves.”

Built on Microsoft’s Azure AI Foundry and Azure Analytics Services, the solution orchestrates and executes AP processes to enable a new era of autonomous finance.

“We commend Genpact for launching its AP Assist product and showcasing how agentic AI can help us reimagine our Accounts Payable helpdesk,” said Caitlyn Carr, President & CEO of Coca-Cola Bottlers Sales & Services. “Together with Genpact, we’ve created a seamless experience for our bottlers and suppliers that exemplifies the power of leveraging advanced technology capabilities, business process expertise, partnership, and trust.”

“Genpact’s launch of an agentic AI product for accounts payable is a proof point of AI’s ability to automate complex multi-step workflows,” said Gurkan Salk, General Manager, Copilot Apps at Microsoft. “Powered by Microsoft’s Azure AI stack, organizations will roll out the Genpact AP Suite knowing enterprise-grade identity, access controls, encryption, and compliance are inherent to the intelligence layer driving their finance transformation.”
