

SG Analytics Boosts Rural Sanitation Infrastructure with Construction of 100 Toilets in Maharashtra

Access to safe and reliable sanitation is fundamental to public health, dignity, and sustainable rural development. Strengthening this essential infrastructure remains a critical priority across underserved regions of India. Aligning with this pressing need, SG Analytics (SGA) is pleased to announce the successful completion of a rural sanitation initiative in Maharashtra.

As part of its Corporate Social Responsibility (CSR) commitment, SGA has supported the construction of 100 modern toilets across selected rural villages in and around Ratnagiri. The initiative is expected to meaningfully improve hygiene conditions, public health outcomes, and overall quality of life for local communities.

Sanitation access remains a key development challenge in rural India. Through this initiative, SGA has sought to help bridge infrastructure gaps while contributing to broader national efforts under the Swachh Bharat Mission. The facilities have been constructed using durable, low-maintenance designs suited for long-term rural use, with strong emphasis on hygiene, safety, and accessibility.

Alongside infrastructure development, the initiative also includes awareness-creating efforts around safe sanitation practices and hygiene education, aimed at encouraging

sustained behavioral change and reducing the incidence of waterborne diseases linked to inadequate sanitation.

This program reflects SGA's broader commitment to responsible business practices and inclusive development. While the company continues to excel in delivering data-driven insights and digital transformation solutions globally, it also remains focused on creating meaningful impact in the communities it operates in.

Speaking on the CSR initiative, SGA CEO Sushant Gupta noted that sustainable growth must be inclusive and community-focused, with targeted interventions that address essential needs such as sanitation and public health.

SGAs remains committed to strengthening its CSR initiatives in alignment with national development priorities and the United Nations Sustainable Development Goals (SDGs), especially those related to clean water, sanitation, and well-being.
